NICTA's unique **Business Process Mashup** technology provides a revolutionary approach to the problem of creating and managing complex business process integrations between organisations.

At a Glance

Vision: Fluid inter-operation of flexible business process systems

- Enable organizations to quickly launch new lines of business integration and serve new customers
- Allow business services and process fragments to be bundled, unbundled and rebundled rapidly
- New runtime infrastructure support takes intrinsic advantage of the “platform” (Web and Cloud)

What's Under the Hood

- Architecture allows completely new organizational structures and strategies
- New process fragments and constraints modeling approach
- New distributed decision-making engine for situational business process mashup.
- Process fragments as first-class entities beyond data mashup (Web 2.0), isolated operation reuse (SOA) and centralized processes

Looking Ahead

- Initial methodologies developed and trialed in industry standard development
- Software technology prototypes under development
- Seeking trial partners who wish to develop Web APIs for their business or move to more flexible B2B integration and mass interoperability solutions
