

Meet the Founder Series

Sharing Entrepreneurial Experiences with the Canberra Community

Dr Neil Miller

The Long and Winding Road

Neil and his wife Janet founded TASKey on 11th of September 1991. His vision was to make workplaces significantly more efficient by creating a multi-user software solution that makes it easy to align and coordinate work from anywhere at any time. Over 20 years, the software solution has had to adapt to many technology changes and matching how people naturally work together. Along the way, TASKey developed the Defence Training Area Safety Management Information System and the Finance Whole of Government Telepresence Booking System. TASKey has employed a self funded business model that has many strengths and many weaknesses. Customers are spread across all levels of Government, NGOs and the private sector. Neil will focus on the rationale for patents and key decisions (good and bad) that have shaped TASKey's long and winding road.
