Improving the Safety and Security of critical Infrastructure – a model

Queensland Transport and NICTA are developing a plan to improve the safety and security of a key element of Queensland's critical infrastructure – the Port of Brisbane. This involves a strategy to implement state-of-the-art existing technology and a close collaboration with NICTA to develop next generation solutions which together will improve the security of this core asset.

Paul Donato from the Port will give an overview of the Port Project, including its breadth of vision, and how it will substantially improve the safety and security at the Port.

Prof. Brian Lovell from NICTA will then discuss how ICT research, specifically intelligent CCTV, will be part of the future of the Port and how advances in CCTV technology will improve the safety and security of infrastructure such as the Port of Brisbane.

This is an opportunity to find out more about a technology that is reshaping the way safety and security of critical infrastructure is undertaken, and how the Port of Brisbane and NICTA will become leaders in the area of maritime port protection.
