

Water Information Networks

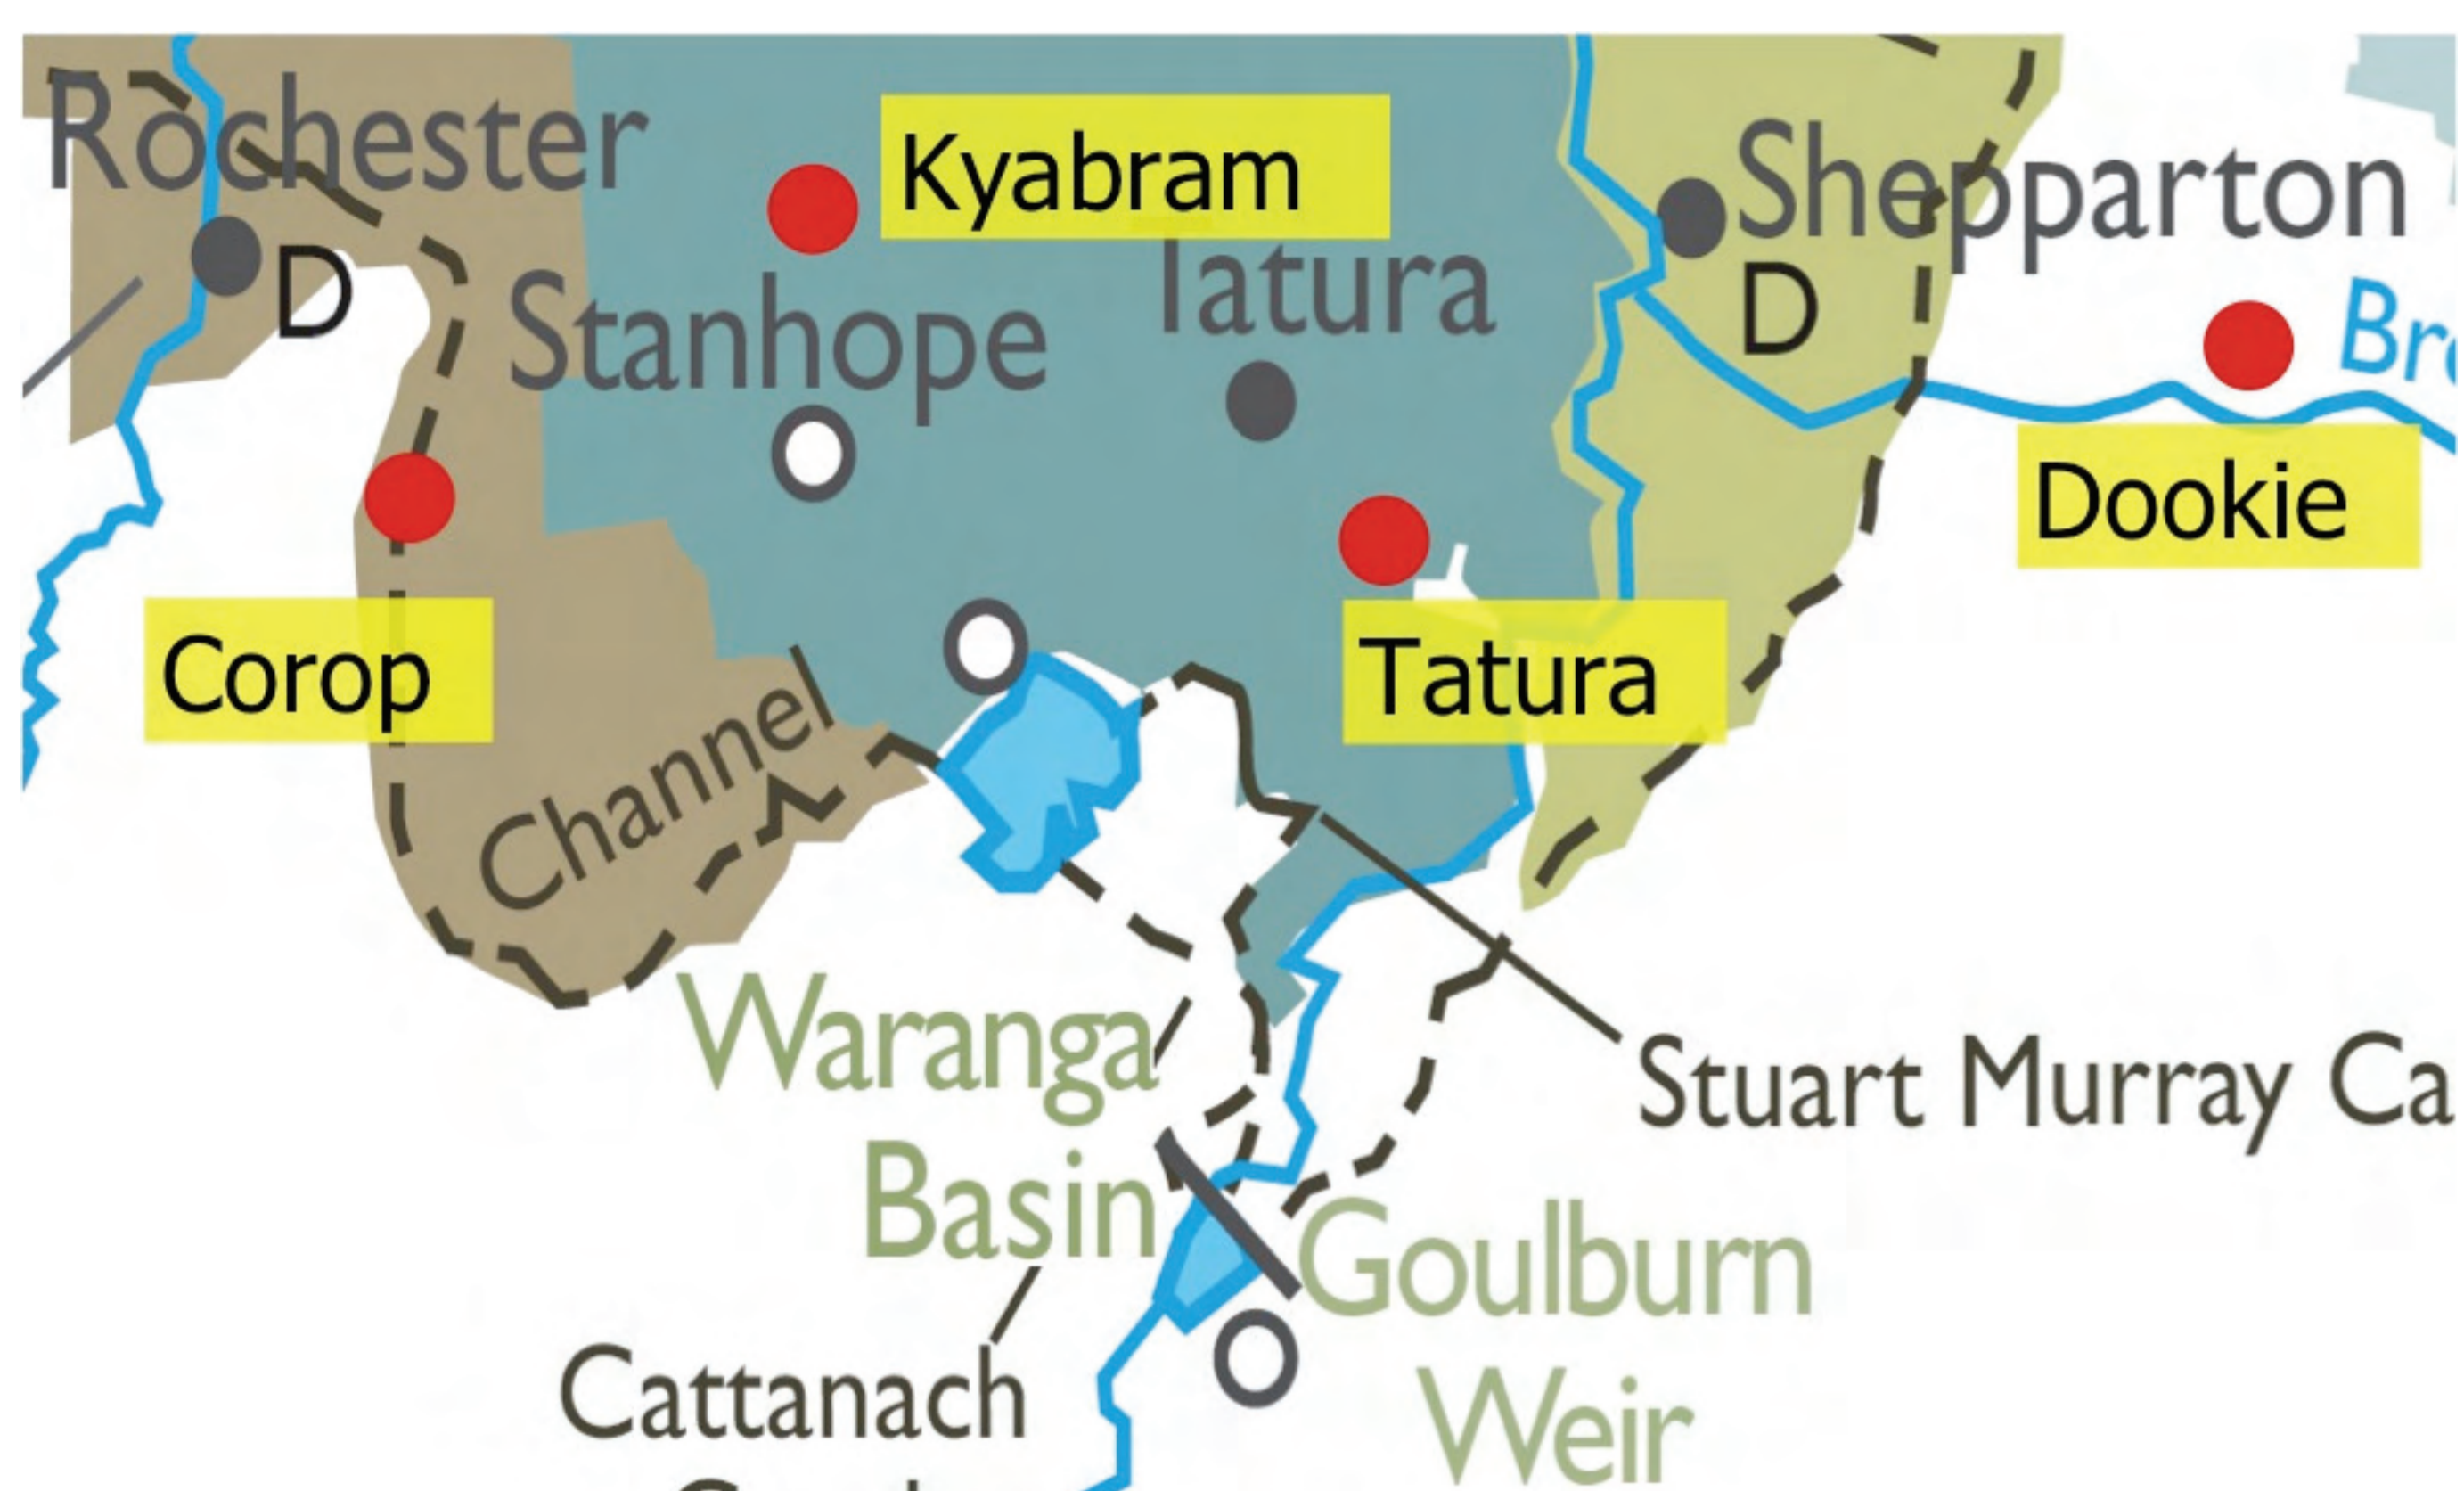

Future-proofing Australia's water resources using ICT

Victorian Science Technology & Innovation Funded Program

"Transforming irrigation on farms using closed-loop control and real-time sensing"

4 sites remotely controlled from Melbourne

Dairy

– 26% water savings per irrigation season (ML of water)

Horticulture

– 74% increase in economic water productivity (AU\$ / ML of water)

Looking forward – A data-centric approach to agriculture and basin management
